CBD Wellness

Dosing Sublingual Tincture

CBD Balance is designed to be combined with an overall dosing protocol that is customized to suit the patient's exact diagnosis and needs. Most illnesses have dosing regimens that are relatively standardized, however, each individual patient's unique physiology, condition and history with cannabis must be considered. The most successful protocols are those that are seen through to completion. **Guideline:** 1 drop per pain level.

How To Use The Tincture

The ideal way to use this tincture is to apply drops sublingually (under your tongue). Use a few drops and then wait to determine the effect. Cannabinoids are quickly absorbed across the mucosa of the mouth into the bloodstream for distribution to the brain and other parts of the body.

Pricing Model

1. CBD Wellness Tincture –1 ounce bottle 29.5ml
 - a. 3,000mg CBD
b. \$120
 - a. 6,000mg CBD
b. \$145
 - a. 10,000mg CBD
b. \$180

Extra Strength Pain Relieving Body Lotion

This minty cool combination features plants selected for their potent anti-inflammatory, anti-fungal, and pain relief properties. Massage as needed onto sore areas and problem skin. Massage desired amount from top to toe, focusing on inflamed areas. Use with massage or body work. Try refrigerating for an extra refreshing sensation after sun or physical activity. Massage onto temples and pulse points to relieve migraines and stress.

When used topically cannabis has a wide variety of benefits, but is non-inebriating and does not show up on a standard drug test. Cannabinoids present in DCS products act as anti-inflammatory, anti-bacterial, antiseptic treatments for topical skin conditions as well as providing quick relief from pain and soreness. Cannabis has been used safely and effectively in traditional medicine for centuries and has a wide range of applications that are again being recognized for their healing and restorative properties.

Hemp CBD Water Soluble Isolate 250mg

Antibacterial, anti-inflammatory, pain relief. CBD extract is effective in treating the pain, inflammation, and irritation associated with many skin conditions. The endocannabinoid system (ECS) is the proper term for the vast network of cannabinoid receptors and their corresponding compounds, endocannabinoids. Turns out, the ECS has a diverse set of responsibilities in the skin. As a giant external organ, the skin experiences quite a bit of stress in daily life. To help it cope, specialized immune cells are present in different skin layers. Endocannabinoids engage with these immune cells to help control inflammatory response.

Applying Doctors Choice cannabis topical can both ease the pain in that area as well as drastically reduce inflammation, inflammatory abrasions, bruises, and skin conditions. Doctors Choice cannabis cream is non-psychoactive. Simply rubbing on a little isn't going to get you high, but instead is a great natural first-aid product to have on hand for minor abrasions and post dermatological procedures.

Arnica, Moringa, Juniper, Peppermint

Relieves pain, reduces bruising, swelling and inflammation, antiseptic, anti-rheumatic, increases circulation by stimulating white blood cell activity, thereby decreasing the amount of skin's healing time.

Pricing Model

Extra Strength Pain Cream CBD – 8 oz pump (arthritis, fibromyalgia, dry skin, acne, eczema and psoriasis)

- | | |
|--------------------|---------------------|
| a. 250mg 8oz 240ml | a. 125mg 4 oz 120ml |

| b. Retail \$320 | b. Retail \$160 |

Mild Pain Relief Hand Sanitizer CBD – 100 mg 2 oz

- a. 100mg 2oz 60ml
- b. Retail \$10

CBD Hand Sanitizer

CBD Hand Sanitizer is very useful, though CBD as an ingredient is lesser known in the market of hand sanitizer. In this time of shortage of hand sanitizers, people are looking out for more and more products that can be used for sanitization purposes, and this is when the CBD has come into the limelight. Ours combines hand sanitizer, the anti-bacterial properties of CBD and mild pain relief. What you need to know about CBD sanitizers is that they are made from the extracts of Cannabis sativa, and this is where it gets its antibacterial properties. If you thought that CBD could make you high, rest assured, CBD can save you from harmful bacteria, but won't cause a psychoactive high.

You will be amazed to know that CBD, when extracted from the plant, is capable of killing deadly bacteria, which cause various diseases that we face in our day-to-day lives. Cannabinoids contained in the Cannabis plant are known to have antibacterial properties, which not only work on bacteria, but also minimizes the proliferation of other microorganisms as well. Cannabinoids are not very well known in the industry. Research is still being done on their ability to kill bacteria and what mechanisms it uses to work.

Background on Hemp CBD

On June 13, 2018 Bill to legalize Hemp passes key Senate Committee. The 2018 agricultural Farm bill includes a provision to legalize hemp nationwide, remove hemp from the federal definition of marijuana. On November 20, 2018 President Trump signed the bill. Meanwhile, medical cannabis advocates argue that the plant could be utilized in the efforts to reduce the average Americans' opioid intake. Studies show that opioid overdose rates consistently drop in states where medical cannabis is available for chronic and/or severe pain.

Hemp is one of the oldest domesticated crops in the world, with the first traces found in 8000 BC in territory that is now part of China and Taiwan. Hemp quickly became integral in everyday life and today counts buildings, boats, blenders and cars amongst its 50,000 uses. Hemp was introduced to North America in 1606 and farmers quickly saw its value and began to produce paper, sails, clothing, ropes and lamp fuel. The US government accepted tax payments in the form of hemp from 1631 to the early 1800s, when farmers were legally required to grow hemp as a staple crop.

Hemp production was heavily impacted by the passage of the Marijuana Tax Act in 1937. In 1970, the Controlled Substances Act (CSA) grouped this versatile crop with drugs such as heroin and LSD despite its lack of psychoactive properties. Over the years, the true benefits of this plant faded from public conscience. The US, has earned the distinction of being the only developed nation in the world without industrial hemp as an established crop.

Federal policy on hemp began its advance with the passage of the 2014 Farm Bill. Congress federally authorized domestic cultivation of industrial hemp so long as state-level legislation had been enacted in accordance with the Farm Bill. The bill's definition of "industrial hemp" is "the plant Cannabis Sativa L. and any part of such plant, whether growing or not, with a delta-9 tetrahydrocannabinol concentration of not more than 0.3 percent on a dry weight basis." Hemp was therefore once again legal, under very limited circumstances, to cultivate. Policy at the federal level effectively prevents full-scale, industrial production of hemp despite their 'marihuana' definition exemptions which include industrial hemp fiber, sterilized seed and seed oil.

A 9th Circuit Court of Appeals case between the Hemp Industry Association (HIA) and the DEA resulted in a negotiated settlement requiring the DEA to take several actions. **Most significantly, as of December 10, 2018, the era of Hemp prohibition is over.** Hemp is now permanently removed from the Controlled Substances Act (CSA). Hemp is forever deemed an agricultural commodity, no longer mistaken as a controlled substance, like marijuana, making it clear that Farm Bill hemp and related cannabinoids are not unlawful, or controlled substances...period.

DCS Chronic pain consumers significantly decrease their use of opioids

- Among our chronic pain consumers we learn that:
 - medical cannabis use is associated with an 84% decrease in opioid use,
 - by way of titrating down from opioids and other medications for chronic pain treatment
 - decreased number and side effects from opioid medications,
 - an improved quality of life,
 - and find the benefit and side effect profile of cannabis to be greater than these other classes of medications alone.

DCS Patient Diagnosis Profile

- Chronic Pain
 - Arthritis
 - Fibromyalgia
 - Migraines
 - Osteoporosis
 - Lumbar Vertebrae Compressions
 - Bursitis
 - Plantar Fasciitis
- Hypertension
- Anxiety
- Depression
- Cancer
- Psoriasis (topical, and arthritic)
- Dermatology - Acne

DCS Patient Treatment Goal

- Transition from Opioid Use
- Decrease current Opioid Regimen
- Titrate down and transition from Opioid Use
- Supplement current medication regimen
 - Pain relief
 - Chemotherapy
- Replace current Opioid Regimen
- Primary pain relief treatment
- Promote hemostasis
